

Problem Statement -

Problem Statement: Startup Blueprint Generator

The Challenge:

Aspiring entrepreneurs struggle to convert their startup ideas into structured, actionable business plans. Market research, funding options, competitor analysis, revenue models, government schemes, and legal requirements are scattered across multiple sources — making it overwhelming and time-consuming for first-time founders to navigate alone.

The Objective:

Build an AI-powered Startup Blueprint Generator Agent, powered by RAG (Retrieval-Augmented Generation), that transforms raw startup ideas into complete, actionable business blueprints.

The system should:

- **Market Intelligence** — Retrieve market research, competitor analysis, and industry trends
- **Business Strategy** — Generate Business Model Canvas and revenue models
- **Financial Planning** — Estimate budget, identify funding options and Indian government schemes
- **Go-To-Market** — Create launch strategy and potential investor connections
- **Pitch Deck** — Produce structured investor pitch

Multi-Agent System:

- **Startup Planner Agent (orchestrator)**
- **Market Intelligence Agent**
- **Business Strategy Agent**
- **Finance and Funding Agent**
- **Go-To-Market Agent**
- **Pitch Deck Agent**

The agent eliminates ambiguity and accelerates the journey from idea to implementation — empowering aspiring entrepreneurs with clarity, resources, and direction to launch their ventures successfully.
